

# Successful projects

**Name of project (Land degradation):** Monoga Syndicate Water Reticulation & livestock husbandry for Rehabilitation of Degraded Range Land (BOT/SGP/OP4/CORE/08/05 & 10/06)

**Goal:** Reducing livestock congestion around Monoga borehole while empowering syndicate members with skills to better manage their livestock and water resources as a means to allow degraded rangeland around the borehole to recover

**Main activities:** Installed of 50,000 gallon Monoga Borehole Water Tank for communal use; laid down 10 km pipe network to reticulate water to 25 syndicate members; put up 5km of drift fence with 5 farm gates to separate the rangeland from Artesia village;

**Key results:** The initiative bridged the gap between livestock husbandry and environment; reticulation of water to individual kraals provided an opportunity for improving livelihoods and substantially reduced grazing pressure around the borehole; imparting of skills on livestock husbandry, water and range conservation raised awareness on environmental conservation and sustainable use of natural resources a means for better returns in the livestock sector
