Path to the Enhanced Transparency Framework: Planning the BTR
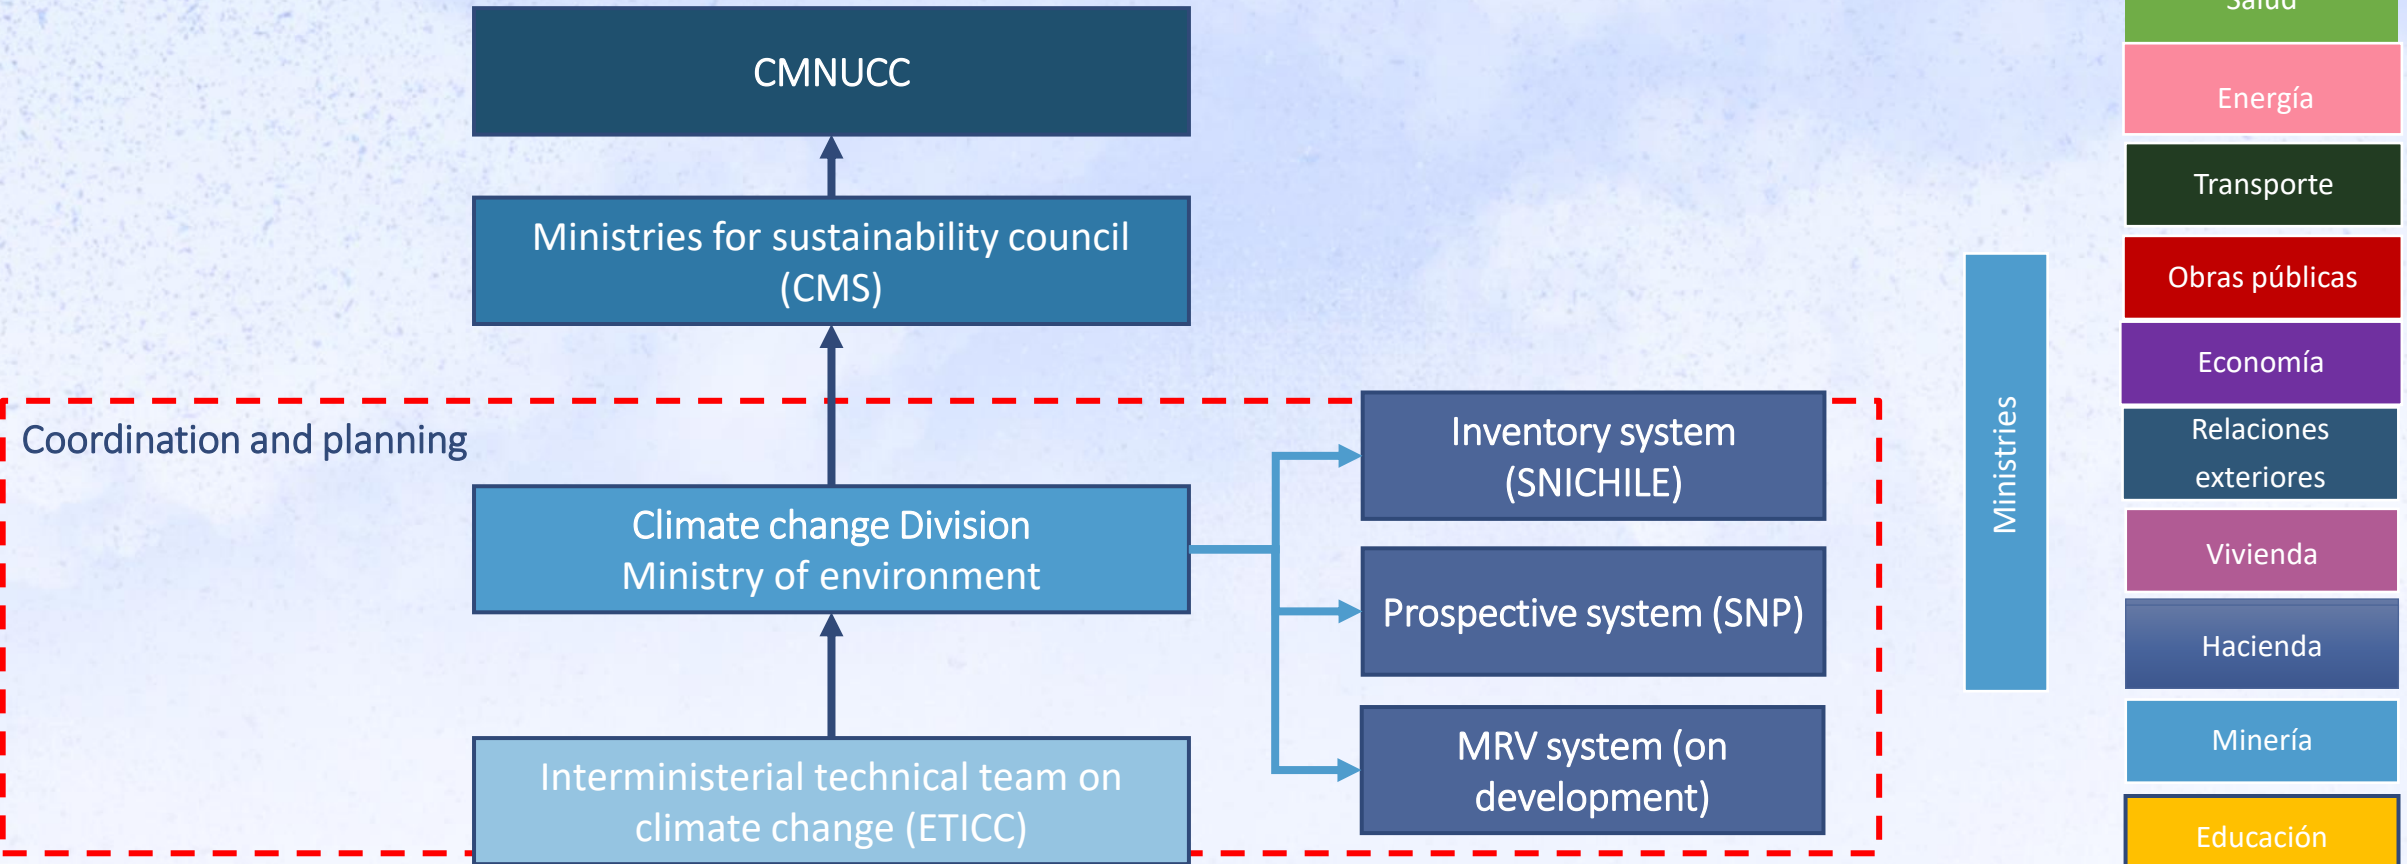

Chile's BURs

5th BUR (2022)

2020-2021

2018

2016

2014

Since 2012 the country has developed different efforts to submit its reports in a timely and appropriate maner, complying with the reports guidelines and requirements

National arrangements

- This structure strengthen with two big steps:
  - Long term Strategy-> National vision and MRV principles
  - Climate change framework law-> Structure and responsabilities

Learned lessons

Agencies

- Although the implementing agencies have to ensure the proper use of GEF resources, it is important that they also understand national circumstances and priorities

- Check that terms and operation of the agencies adjust to the Project needs

- Previously agree on Working conditions and procedures.

Resources

- Planning with sense of reality: resources are finites

- Consider in the project's budget enough resources to cover gaps between project's applications.

- Commit national resources to regular tasks.

Management

- Prioritize the use of resources in "permanent assets"

- Set Project´s Budget considering the logic of the national's budget

- Implement with a systemic visión of the reporting process (*CBIT experience*)

Preliminary work

Understanding requirments (MPG)

- Understand each sections

- Balance between the requirements, their type of obligation (and flexibilty) and country's expectations

- Check the state of the national systems/teams and plan improvement action

National interests

- Beyond reporting for reporting: information for public policies and communication.

- Sinergy with other climate change and enviromental commitments.

- Relationship between national statistics and systems

Resources management

- What do we have?

- Which areas require more work/resources to fulfill the MPGs?

- How to balance the use of resources between the differents reports (national and international)?

- How to avoid intensive use resources in recursive tasks'?

- What other support could we receive?

Thanks!

Richard Martinez
Coordinator of the National
GHG inventory system
