**Executive Summary**

1. This review aims at understanding the principal themes for recommendations in IEO evaluations, the factors that affect the level of adoption and follow-up of IEO evaluation recommendations. It also provides early feedback on the management responses, including the action plans, to the evaluations presented by the IEO since the transition to a revised MAR process in 2021. By assessing the MAR systems of other multilateral institutions, the review also draws lessons from their experience.

2. This review covers 16 annual MAR reports presented to the GEF Council between 2006 and 2021, including 186 evaluation recommendations/GEF Council decisions of 59 IEO evaluations and their management responses, and 435 records of management’s self-assessments of the adoption of recommendations, together with the corresponding IEO validations presented in the MAR.

**Main Findings**

3. Sixty one percent of GEF IEO evaluation recommendations were operational in nature, and thirty three percent were fully adopted upon graduation or retirement. Policy recommendations were more likely to be fully adopted. The recommendations that were not fully adopted were often those that had financial implications or practical constraints. A few issues, such as improving data quality and data management, are repeated in GEF IEO recommendations over time, reflecting both the importance of the issue and the sustained efforts required to address it.

4. The management response rate to evaluation recommendations has significantly improved since the MAR process reform, and GEF management agreement with IEO recommendations has been increasing over time, in part due to the engagement between the IEO and GEF management on the evaluation findings and recommendations. The level of detail in management responses regarding the specific types of actions and the timelines to address recommendations has also improved significantly since the MAR reform, with about two thirds of the management responses including specific actions with timelines.

5. Recommendations that were not accompanied by a management response were not likely to achieve full adoption. Recommendations are more likely to achieve full adoption when follow-up actions are identified in the management responses. It is often difficult to determine the extent of progress, without a timeline for implementation of follow-up actions. When the management response provides a time-bound action plan to address the recommendation, it is feasible to assess implementation progress and adoption level by the target completion date.

6. The concurrence between management’s self-assessment ratings and IEO validation ratings has improved over the GEF replenishment periods, demonstrating a shared understanding on the implementation progress of follow-up actions to recommendations. It takes four years on average for majority of recommendations to achieve at least a substantial level of adoption. A Council decision and the associated recommendations are retired when less than substantial progress has been achieved in their implementation and more than five years have elapsed since the decision was made, or subsequent Council decisions have superseded
the earlier decision. Seventy five percent of retired recommendations are rated as less than substantially adopted.

7. The benchmarking exercise found that the GEF formal process of tracking and reporting on the implementation of recommendations shares some of the good practices in institutions with independent evaluation units, and that the GEF is more advanced than other global partnerships in having such a formal system. Gaps identified include limited time for management to develop detailed action plans with timelines, unclear articulation on the level of agreement with each recommendation, management responses which do not always include action plans with timelines for recommendations that are agreed with, and the absence of an online platform to record and monitor implementation of recommendations or which facilitates the participation of relevant parties.

Conclusions and Recommendations

8. **Conclusion 1: GEF IEO recommendations are implemented with substantial follow-up actions.** During the assessed period (2006–21), 74 percent of the recommendations were adopted with full or substantial status. Policy recommendations were more likely to be fully adopted than were recommendations on strategic or operational issues. Recommendations were more likely to be adopted when they were aligned with the GEF Secretariat’s work plans on GEF corporate-level policies.

9. **Conclusion 2: Recommendations were more likely to be implemented and adopted when management expressed full agreement and clearly identified follow-up actions in the management responses to recommendations.** When recommendations were fully agreed upon by management, they were more likely to be adopted (at least substantially), compared to partially agreed or rejected recommendations. Recommendations were also more likely to be fully adopted when follow-up actions to address them were specified in the management responses.

10. **Conclusion 3: Management responses prepared after the MAR process reform provide a greater level of detail in action plans to address recommendations; tracking progress on implementation will require actions and timelines in all cases.** Both management’s response rate and level of agreement with recommendations have improved since the change in the MAR process was introduced in June 2021. The majority of the management responses prepared after the MAR reform included action plans with time frames. Where such timelines are missing, it will be difficult to track whether follow-up actions are completed in a timely manner.

11. **Conclusion 4: The concurrence in management’s self-assessment and the GEF IEO’s validation ratings has improved, indicating a shared understanding on implementation and adoption.** The GEF MAR adopts a two-tier approach to assessing the adoption of recommendations, which involves self-assessment by management and its validation by the GEF IEO. The concurrence in the assessment ratings has improved over the GEF replenishment periods. Going forward, the assessment rating scale in the MAR will be updated to assess progress against the management action plans.
12. **Conclusion 5:** The comparative analysis demonstrates that while the GEF MAR system has several good practices, there are gaps that can be addressed to make the system serve as a better accountability and learning tool. The GEF MAR process has improved since the reform in 2021. The system would benefit further from clearly addressing the recommendations to specific actors in the partnership, a clear articulation of acceptance or rejection of recommendations by management, a time-bound action plan in the management response, greater participation of GEF Agencies on relevant recommendations, and the use of a suitable platform to improve access and efficiency in recording and monitoring the implementation of recommendations. If a period of more than 8 weeks prior to presentation of an evaluation is required to develop a detailed action plan with timelines in response to an IEO evaluation, the Council might, in certain cases, consider allowing the presentation of the detailed action plan and timelines by the GEF Secretariat at the next Council meeting. The GEF Secretariat would still present a management response at the Council meeting in which the IEO evaluation is presented.

**Recommendations**

13. **Recommendation 1:** GEF management should ensure that the action plan included in its management response to GEF IEO recommendations lists specific actions with timelines where appropriate. GEF management should ensure that the management response to an evaluation clearly indicates the level of agreement with each recommendation. Where management fully or partially agrees with a recommendation, a clear articulation of time-bound actions should be included in the management response which will make it possible to track progress on the implementation of follow-up actions and report on these to the Council. Where additional time is required by the GEFSEC to develop detailed action plans and timelines on certain evaluations, the Council may consider giving the GEF Secretariat time until the next Council meeting to present the details.

14. **Recommendation 2:** The GEF should improve the MAR process and reporting through a more participatory approach involving GEF Agencies, where relevant, and develop a suitable platform for tracking the implementation of action plans. Where IEO recommendations are clearly directed towards GEF Agencies or other actors, GEF management should explore ways to incorporate Agencies’ and/or others feedback and comments when preparing action plans to implement IEO recommendations and in assessing the implementation progress of follow-up actions. In this way, Agencies or other actors can respond to recommendations that are directed toward them and will be able to implement and track these recommendations. A suitable platform that centralizes the recording of recommendations, management responses, action plans, and follow-up will help streamline access and improve efficiency in monitoring the status of implementation.
1. **INTRODUCTION**

1. In November 2004, during discussion of the elements for a new GEF Monitoring and Evaluation (M&E) Policy, the Global Environment Facility (GEF) Council agreed with a proposal by the GEF Independent Evaluation Office (IEO) to develop procedures “for the follow-up of monitoring and evaluation reports through management responses” and for “preparing a management action record (MAR) for reporting on the follow-up on the Council’s decisions on evaluation recommendations.” In the November 2005 meeting, the GEF Council approved the procedures and format of the GEF Management Action Record, and requested the GEF Secretariat and the GEF IEO to prepare the GEF MAR in consultation with the appropriate GEF entities.

1.1. **Evolution of the MAR**

2. The MAR has been presented to the GEF Council on an annual basis since June 2006. It is the main accountability mechanism for monitoring and reporting on the implementation of Council decisions related to evaluation recommendations.

3. Until 2021, the Council endorsed the recommendations of IEO evaluations, and the GEF IEO tracked implementation of the recommendations. The GEF Secretariat provided a management response to the IEO evaluations and recommendations, but the specific actions included in the management response were not endorsed by the Council. Each year, as part of the MAR process, the IEO reported on the implementation progress of the evaluation recommendations, and not on the specific actions noted in the management response; however, the management response was included in the MAR template to provide context for progress in follow up.

4. As a follow-up to the Professional Peer Review of the Independent Evaluation Function of the Global Environment Facility (2019), the GEF IEO, in consultation with the GEF Secretariat and the Council, agreed on a revised process. As part of this revision, GEF management responds to each GEF IEO evaluation recommendation with an action plan, and the Council comments on and endorses this action plan. Under this revised process, the Council decision does not endorse the IEO evaluation recommendation, but rather endorses the management action plan. The IEO tracks progress on implementation of the action plan endorsed by the Council. While this revised process maintains a focus on follow-up actions, instead of assessing progress against actions recommended by the IEO, the MAR tracks progress against the actions and time frames provided in management’s action plan.

5. In the wake of the revised MAR process, the GEF Council began to endorse management’s action plans in June 2021. As the GEF transitions to this new MAR process, this is a timely opportunity to learn from the GEF’s long MAR experience, gain some early insights into whether the action plans prepared by GEF management provide a good basis to track progress in their implementation, and learn from current practices in peer organizations and the GEF.

---

Agencies. This review, which is a first of the GEF MAR, aims to enhance our understanding in these areas. An assessment of actual progress in implementation of GEF action plans will begin in 2023; this will include an update of the MAR template and rating scale.

1.2. MAR process and assessment ratings

6. Until 2021, the GEF assessed implementation of recommendations endorsed by the GEF Council through a multi-step MAR process. Key steps in this process include the following:

(a) After the evaluation report is shared with GEF management, the recommendations are discussed with management before finalizing the evaluation report, and a management response is prepared in response to the evaluation’s recommendations.

(b) The evaluation recommendations and corresponding management responses are presented to the GEF Council for discussion.

(c) The IEO compiles the evaluation recommendations, management responses, and council decisions in the MAR after the council endorsement of IEO’s recommendations.

(d) On an annual basis, the GEF management self-assesses, and GEF IEO validates, the progress on the adoption and implementation of recommendations tracked in the MAR. This assessment uses a four-point rating scale, as discussed in the next paragraph.

(e) The IEO presented overall analysis on the adoption of recommendations to the GEF Council in its annual performance report at each June Council meeting.

(f) The MAR uses a four-point rating scale to assess the adoption level of recommendations:

- **High:** Fully adopted and fully incorporated into policy, strategy or operations.
- **Substantial:** Decision largely adopted but not fully incorporated into policy, strategy or operations as of yet.
- **Medium:** Adopted in some operational and policy work, but not to a significant degree in key areas.
- **Negligible:** No evidence or plan for adoption, or plan and actions for adoption are in a very preliminary stage.

7. A recommendation may be graduated or retired from the MAR. A recommendation is graduated when it achieves a high or substantial level of adoption.³ A recommendation may be retired based on subsequent Council decisions, or where further progress on adoption is likely to be slow and long drawn out. A recommendation is automatically retired when a decision has been reported on in the MAR for five years but has not achieved a high or substantial level of

---
³ Some recommendations may be maintained in the MAR even after achieving substantial progress, if the GEF IEO assesses that a higher level of adoption is feasible.
adoption. Often, such recommendations are noted in subsequent evaluations conducted on a similar theme or issue.

8. The revised MAR process retains most of the above-described elements of the process. However, instead of tracking the implementation of IEO evaluation recommendations, the MAR focuses on the implementation of the management’s action plans endorsed by the GEF Council.

2. **Review Objectives and Scope**

9. This review aims at understanding the factors that affect the level of adoption and follow-up of IEO evaluation recommendations. It also provides early feedback on the management responses, including the action plans, to the evaluations presented by the IEO since the transition to a revised MAR process in 2021. By assessing the MAR systems of other multilateral institutions, the review also draws lessons from their experience.

10. The in-depth analysis of this review covers 16 annual MAR reports presented to the GEF Council between 2006 and 2021, including 186 evaluation recommendations/GEF Council decisions of 59 IEO evaluations and their management responses, and 435 records of management’s self-assessments of the adoption of recommendations, together with the corresponding IEO validations presented in the MAR.\(^4\) The IEO has presented 35 recommendations from nine evaluations since the reform of the MAR process in June 2021; this review assessed the quality of the management responses to these recommendations and compared them with management responses developed before the MAR reform.

2.1. *Questions and methodology*

11. Based on the objectives and scope, the review was guided by the following questions:

   (a) What are the principal themes for recommendations in IEO evaluations, and what has been the GEF’s record in adoption and implementation?

   (b) Do the management responses provide a sufficient basis for assessing the implementation progress of follow-up actions?

   (c) What are some current practices across multilateral organizations in assessing progress in implementation of management’s action plan to address an evaluation’s recommendations?

12. The following methods were used to collect information.

   (a) **Portfolio review.** A database of the MAR annual reports was compiled to take stock of the following: duration for which a recommendation is tracked; GEF management self-assessment on the level of adoption of a relevant recommendation/Council decision; independent assessment on adoption by the IEO.

---

\(^4\)Recommendations from the comprehensive evaluations of the GEF (OPSs) are not tracked in MARs; hence, OPS high-level recommendations and their management responses are not included in this review.
Interviews. An interview protocol was used to interview key stakeholders involved in the GEF MAR process, including GEF management and GEF Agencies (see annex 2).

Benchmarking of MAR systems. This included document review and comparison of the MAR systems of nine multilateral organizations that have independent evaluation functions (see annex 3). MAR approaches—including the roles of the key actors, the MAR process flow, ratings of management action status, and MAR information management platforms used to facilitate tracking of progress—were compared.

GEF IEO recommendations were categorized based on theme or subject matter and the targeted level of the results chain. The review assessed whether a management response addressed each of the recommendations of the corresponding evaluation, and whether it indicated the level of agreement with the recommendation and provided detail on follow-up actions. The categories of recommendations, and assessment of the specificity in the management response were used to identify factors that may be associated with the adoption of recommendations.

2.1. Categorization of recommendations

The United Nations Evaluation Group defines evaluation recommendations as “proposals aimed at enhancing the effectiveness, efficiency, impact, relevance, sustainability, coherence, added value or coverage of the operation, portfolio, strategy or policy under evaluation. Recommendations are intended to inform decision making, including program design and resource allocations.” In line with this definition, 186 recommendations in the GEF MAR were classified into three categories based on their focus.

(a) **Strategic**: recommendations related to GEF strategic directions and programming

(b) **Operational**: recommendations related to GEF operations and implementation of strategy/policy

(c) **Policy**: recommendations related to the development and revision of GEF policies and principles

Depending on their stated intended results, the recommendations were classified into one of three levels of the results chain.

(a) **Directional**: results set as goals and objectives

(b) **Outcome-oriented**: desired change for improvements in operations, strategy, or policy

(c) **Output-oriented**: specific actions contributing to achieving outcomes

---

2.2. Specification of management response

16. Management responses prepared before and after the revision of the MAR process were compared and assessed along three aspects.

   (a) **Response rate**: whether a management response was provided for each recommendation
   
   (b) **Level of agreement**: whether the management response explicitly stated the level of agreement with a recommendation
   
   (c) **Details of follow-up actions**: whether time-bound actions to address the given recommendation were specified in the management response.

17. The management response to each recommendation was analyzed using sentiment analysis (with the NVivo software) to better understand and codify management’s level of agreement with/acceptance of each recommendation. In this review, four types of sentiments were identified in the management responses, corresponding to three different levels of agreement:

   (a) **Agreed**: full agreement with specified actions (positive), or broad agreement (neutral)

   (b) **Partially agreed**: partial agreement (mixed).

   (c) **Rejected**: did not agree (negative).

3. FINDINGS

3.1. Types of recommendations

18. This section presents the distribution of different categories of IEO evaluation recommendations. The relationship between the types of recommendations and the level of adoption is also presented.

19. **The majority of GEF IEO evaluation recommendations were operational in nature.** Of the 186 recommendations tracked in the MAR, 61 percent (113) were related to operational issues, followed by strategic issues (32 percent, 59) and policies (7 percent, 14). As shown in figure 1, operational recommendations were mainly output oriented (56 percent, 63), while recommendations concerning strategies and policy topics were mainly outcome oriented (90 percent and 71 percent, respectively).
20. Directional recommendations that set goals or objectives for desired changes were found in recommendations focusing on operational issues. The examples in Box 1 serve to illustrate the types of recommendations and intended results expected from the evaluation recommendations.
Box 1: Examples of types of recommendations and intended results

Outcome-oriented strategic recommendation: the GEF should consider further investment and capacity development to assist countries with economies in transition to address the remaining threats to the ozone layer. (Recommendation 1 of the 2009 GEF Annual Report on Impact)

Output-oriented strategic recommendation: the GEF should develop country programs and strategies for large recipients of GEF support like the Philippines. (Recommendation 1 of the 2007 GEF Country Portfolio Evaluation in Philippines)

Directional operational recommendation: recommendations to improve project M&E systems have been issued in the past, as well as request to include an assessment of project M&E systems in all terminal evaluation reports. While there have been advances in upgrading project M&E systems, there is still considerable room for improvement, and therefore the Office considers that these recommendations continue to be valid. (Recommendation 1 of the 2004 GEF Annual Performance Report)

Outcome-oriented operational recommendation: address the shortcomings of the focal area tracking tools. GEF needs to rethink the approach to tracking tools for the biodiversity and multiple focal area projects. (Recommendation 3 of the 2017 Review of Results-Based Management in the GEF)

Output-oriented operational recommendation: fully documented project proposals should be endorsed by the CEO on a rolling basis. (Recommendation 4 of the 2006 Evaluation of the GEF Activity Cycle and Modalities)

Outcome-oriented policy recommendation: the GEF Secretariat should make efforts to improve consistency regarding their understanding and application of the GEF gender mainstreaming policy and the Gender Equality Action Plan (GEAP) to the LDCF. (Recommendation 2 of the 2016 Evaluation of the Least Developed Countries Fund)

Output-oriented policy recommendation: monitor application of Minimum Standard 4 and Indigenous Peoples’ portfolio. [...] Agencies should inform GEF of the safeguard risk categorization assigned to projects involving indigenous peoples and keep GEF informed of safeguards implementation issues through monitoring and reporting. (Recommendation 5 of the 2015 Review of GEF’s Engagement with Indigenous Peoples)

Note: no directional recommendation was found in strategic or policy recommendations.
Source: GEF MAR annual reports.

21. **A higher percentage of policy recommendations achieved full adoption as compared with strategic and operational recommendations.** Of the 13 policy recommendations that have graduated/retired from MAR, 46 percent (6) achieved full adoption; while 27 percent (13) of strategic recommendations and 33 percent (30) of operational recommendations were fully adopted upon graduation/retirement (figure 2).

22. **The fully adopted policy recommendations** are related to the recent updates and revision of GEF corporate-level policies in GEF-6, such as the revision of the GEF Policy on Gender Equality and the updated GEF Policy on Environmental and Social Safeguards. The recommendations were presented when processes to review and revise these policies were initiated by the GEF Secretariat. The timing and alignment of the IEO’s policy recommendations with the GEF Secretariat’s revision plans led to their full adoption.

23. **The fully adopted strategic and operational recommendations** were aligned with the replenishment discussions. The recommendations were timely and influenced GEF
programming for the following GEF period. For example, the GEF Annual Report on Impact (2009) recommended that “GEF-5 strategy proposals, prepared by the Secretariat, should include further investment and capacity development to assist countries with economies in transition to address the remaining threats to the ozone layer.” It achieved full adoption within two years of implementation, as the GEF-5 focal area strategy for chemicals developed in 2010 included provisions for investments in economies in transition to support them in meeting their reporting obligations under the Montreal Protocol. Another example is a recommendation from the 2013 Midterm Evaluation of the National Portfolio Formulation Exercise (NPFE), which called for continued implementation of NFPEs by the GEF Secretariat to maintain neutrality between countries and Agencies and to provide funding for a country-led NPFE on a voluntary basis. This recommendation was fully adopted in 2014, with a proposal developed by the GEF Secretariat, and was included in the replenishment documents for GEF-6.

24. **The recommendations that were not fully adopted were often those that had financial implications.** For example, the 2004 Program Study on International Waters recommended that the International Waters Task Force produce an accessible focal area manual to clarify the processes related to recurrent difficulties observed in project design and implementation. The management’s self-assessment in the MAR reported that there was limited progress in implementing this recommendation as additional resources were required to produce the manual. A training course was provided to fill the gap in the interim. This recommendation was retired with a medium level of adoption.

25. **Some recommendations were not adopted due to practical constraints.** The 2009 Annual Country Portfolio Evaluation Report in GEF-4 recommended that the GEF should focus its attention on countries in exceptional situations concerning limited access to International Financial Institutions, like Syria. After being tracked in the MAR for five years, this recommendation was retired with negligible action, as noted by management’s self-assessment that “limited access to IFIs [international financial institutions] by certain countries may result from larger political considerations that are beyond the remit of the Secretariat and the GEF network.”

Note: 151 recommendations that have graduated or retired from MAR tracking are included in this analysis.
26. Of the six directional recommendations that set goals or objectives for continued improvement of GEF operations, it was difficult to assess the extent of their achievement in the MAR (figure 3). For example, the 2011 Annual Performance Report recommended that the GEF Agencies continue to include operational focal points in M&E plans at project entry and improve their efforts to specify how the operational focal points would be engaged in project or program M&E. After being tracked in the MAR for two years, the IEO retired this recommendation in 2014 as “not possible to verify,” stating that “although some actions are starting to take place, it is not practical to verify the extent of such engagement.” Several of these issues were then assessed and noted in subsequent thematic evaluations.

Figure 3: Level of adoption by intended results of recommendations

Note: 151 recommendations that are graduated or retired from MAR tracking are included in this analysis.

27. A few issues are repeated in GEF IEO recommendations over time, reflecting both the importance of the issue and the sustained efforts required to address it. For example, improving data management and data quality in the GEF’s Project Management Information System (PMIS, now replaced by the GEF Portal) is a recommendation theme picked up by six different evaluations from 2007 to 2017; while substantial progress has been made, there is still further work to be done. Another example is the recommendation for improving the System for Transparent Allocation of Resources (STAR) calculation and data quality control. This recommendation was included in the Midterm Evaluation of the STAR in 2013, which was graduated in 2015 as largely adopted (rated as substantial). The evaluation of the STAR in 2017 acknowledged substantial progress following the 2013 recommendation, but identified other areas where improvement is needed, including data quality and calculation accuracy in the STAR models. This recommendation was assessed as largely adopted and was graduated from the MAR in 2021.

28. The recommendation for improving the measurement of greenhouse gas emissions reduction in GEF projects was first included in the 2004 Program Study on Climate Change. It was retired in 2006, as the methodological guideline was still in progress and required further resources. The 2013 GEF Annual Impact Report brought up the recommendation once again.
This time, the GEF Secretariat and the GEF Scientific and Technical Advisory Panel formulated a research project with three working groups to improve the GEF greenhouse gas accounting methodologies. As a result, the “Guidelines for Greenhouse Gas Emissions Accounting and Reporting for GEF Projects” was developed and presented to the Council in June 2015. This recommendation was graduated from the MAR in 2016 with a substantial level of adoption.

3.2. Management response to IEO evaluation recommendations

Response rate

29. The management response rate to evaluation recommendations has significantly improved since the MAR process reform. On average, 89 percent of Council-endorsed recommendations received management responses before the MAR process revision (table 1). Since the change in the MAR process was introduced in June 2021, all of the 35 recommendations (100 percent) received a specific management response from GEF management, demonstrating a significant increase in the response rate. Having the Council endorse management’s action plan contributed to this improvement, as the GEF Secretariat gives more attention to providing a response to each recommendation.

a. In GEF-7, only two recommendations from the Program Evaluation of the Least Developed Countries Fund (2020) were included in the MAR as of June 2021.
b. Two recommendations were directed to the GEF IEO; as these did not require responses from GEF management, they were excluded from this analysis.

Level of agreement in management response

30. Management responses are usually not clear on the extent of agreement with IEO recommendations. GEF management uses different terms to suggest agreement with IEO recommendations, such as “agrees,” “takes note of,” “welcomes,” “supports,” and “appreciates.” The sentiment analysis conducted as part of this review used contextual information provided in the management responses to determine whether the terms used by the Secretariat indicated full or partial agreement. This review categorized the levels of agreement as agreed, partially agreed, or rejected, corresponding to four types of sentiments. Box 2 shows examples of management responses expressing different levels of agreement.

6 The IEO presented 35 recommendations from nine evaluations in the three most recent GEF Council meetings (June 2021, December 2021, and June 2022). The nine high-level recommendations from the OPS7 report are not included here.
Box 2: examples of management responses expressing different levels of agreement

Full Agreement (positive sentiment):
The Secretariat fully agrees with Recommendation 2 that GEF-6 strategies should enable a more flexible and strategic approach to developing Multi-Focal Area projects, which would be able to adopt elements from several focal areas in a consistent manner. The Secretariat and the Agencies have initiated discussions in regards to the streamlining measures, and will continue to work with our partners to develop a more coherent strategy for Multi-Focal Area projects in GEF-6. (Management response to recommendation 2 from the 2012 Annual Thematic Evaluations Report)

Full Agreement (neutral sentiment):
The Secretariat appreciates IEO’s review of results-based management (RBM), which comes at an important time for the GEF Partnership. As recognized in the review, RBM has been a key area for internal reform in GEF-6, and further work is required to put in place an effective, fit-for-purpose results architecture for GEF-7. Accordingly, the Secretariat agrees broadly with IEO’s recommendations and is in the process of addressing many of these. (Management response to the 2017 Review of Results-Based Management in the GEF)

Partial Agreement (mixed sentiment):
While we agree with the need to further refine, clarify, and strengthen the Strategic Priorities and the utility of the impact and coverage indicators and their associated targets, we believe the Study failed to acknowledge that these efforts have already brought substantial strategic direction to the GEF Biodiversity Program during GEF-3. (Management Response to recommendation 8 from the 2004 Program Study on Biodiversity)

Rejection (negative sentiment):
The Secretariat does not support this recommendation. The Secretariat has an obligation to respect the focal area allocations agreed during the replenishment negotiations. From the perspective of a country, increasing flexibility implies greater autonomy on how resources are used. Increasing flexibility means a fundamental shift in resources among focal areas that could be in gross contravention of replenishment agreements. (Management response to recommendation 1 from the 2013 Midterm Evaluation of the STAR)

Source: GEF MAR annual reports.

31. GEF management agreement with IEO recommendations has been increasing over time. Of the 35 recommendations presented after the June 2021 MAR reform, 89 percent received full agreement from management; this reflects a nominal increase over the previous period, when the average agreement rate was 85 percent (table 2). During GEF-3, when the MAR was a relatively new instrument at the GEF, management’s agreement rate was lower at 76 percent (at 95 percent confidence). There also appears to be a decrease in the number of instances of GEF IEO recommendations being rejected by GEF management, reflecting a greater clarity and common interpretation of evaluation recommendations. The engagement between the IEO and GEF management on the recommendations has also contributed to this clarity and agreement.
Table 2: Distribution of recommendations by level of agreement and GEF replenishment period

</tbody>
</table>

Note: agreement rate is calculated as a percentage of agreed recommendations of the total recommendations. Only the 164 recommendations that received management responses were included in the analysis.

a. In GEF-7, only two recommendations from the Program Evaluation of the Least Developed Countries Fund (2020) were included in the MAR as of June 2021.

32. Among the 24 recommendations (15 percent) that were partially agreed upon or rejected before the MAR reform, the main reasons identified in the management responses include the following:
   (a) Recommended actions have been adopted by the GEF Secretariat, or recommendations did not fully reflect the ongoing efforts made by the GEF Secretariat.
   (b) Recommended actions were not within the GEF Secretariat’s responsibility.
   (c) Recommended actions had implications for financing or required additional resources.

Details of follow-up actions in the management response

33. The level of detail in management responses regarding the specific types of actions and the timelines to address recommendations has improved significantly since the MAR reform. Each of the 35 recommendations presented to the Council after the MAR process reform received a management response, 86 percent of which have specified follow-up actions. This represents a significant improvement over the period before the MAR revision, when this figure was 57 percent (table 3). For example, the 2021 Evaluation of the Agency Self-Evaluation Systems recommended that the GEF Secretariat and Agencies strengthen the use of midterm reviews for learning and adaptative management. GEF management fully agreed with this recommendation and identified three concrete actions in the management response, namely strengthening guidance, implementing a more efficient midterm review process, and better tracking midterm review submissions.

34. The majority of the management responses to recommendations specify actions along with time frames (63 percent), representing an improvement from 31 percent for the pre-reform period. Specifically, these management responses included either a specific completion date of the identified actions or a broad timeframe of implementation. For the remaining 37 percent, it will be difficult to track time-bound progress. The findings show that, of the recommendations for which management should have specified follow-up actions, 14 percent did not include such specifics. Similarly, for 37 percent of recommendations, time frames have
not been provided; in these cases, it will be difficult to track whether follow-up actions are completed in a time-bound manner.

Note: 164 recommendations that received management responses were included in the analysis
a. In GEF-7, only two recommendations from the Program Evaluation of the Least Developed Countries Fund (2020) were included in the MAR as of June 2021.

Factors influencing the adoption of recommendations

35. Recommendations that were not accompanied by a management response were not likely to achieve full adoption. In the period prior to June 2021, 20 recommendations/Council decisions did not receive a management response (see annex 1 for the full list). Of these, 11 have graduated or been retired from the MAR, and none was adopted fully with a high rating (figure 4). No specific reason was documented in the MAR regarding why a management response was not prepared for these recommendations. In the case of the 2005 Annual Performance Report in GEF-3, two recommendations that did not receive management responses were directed to GEF Agencies. In the case of the 2017 Biodiversity Focal Area Study in GEF-6, a total of 12 recommendations were presented in the evaluation report, and management’s response covered only three recommendations that pertained to the Global Wildlife Program.7

7 Management response to SEAR (GEF/ME/C.53/02), [https://www.thegef.org/sites/default/files/council-meeting-documents/EN_GEF.ME_.C.53.02_MR_to_SAER_0.pdf](https://www.thegef.org/sites/default/files/council-meeting-documents/EN_GEF.ME_.C.53.02_MR_to_SAER_0.pdf)
36. **When recommendations are fully agreed upon by management, they are more likely to be adopted than partially agreed or rejected recommendations.** Recommendations and their follow-up actions were tracked in the MAR regardless of whether they were agreed to by management. Of the 119 recommendations that were graduated or retired from the MAR with a full agreement in the management responses, 76 percent (91) were adopted highly or substantially, whereas 9 out of 14 (64 percent) partially agreed recommendations reached the same level of adoption (figure 5).

37. **An example of a partial agreement with a recommendation is from the 2012 Annual Country Portfolio Evaluation Report, which recommended that “project approval and implementation in small island developing states (SIDS) should be more flexible and context-specific.”** GEF management agreed partially with this recommendation, noting that “caution should be exercised in order not to give the impression that each country’s unique needs can be met in every case.” In the self-assessment in the MAR, the GEF Secretariat noted that it was not feasible to tailor approval and implementation procedures and/or standards for specific groups of countries. This recommendation was retired after three years, with negligible action being taken, but was reflected in a subsequent country cluster evaluation of the SIDS.

38. **There were several instances where management initially disagreed with a recommendation, but effectively implemented the actions suggested in the recommendation.** Three out of five recommendations rejected by management were subsequently adopted with a high or substantial rating upon graduation. For example, the first recommendation from the 2013 Midterm Evaluation of the STAR recommended that the limits for flexible use of focal area allocations should be increased for countries with marginal flexibility. GEF management disagreed with this recommendation, as the GEF Secretariat had an obligation to follow the focal area allocations agreed to during the GEF-5 replenishment negotiations. However, the Secretariat took this recommendation into consideration when developing the STAR proposal for GEF-6. In May 2014, the GEF Council approved the GEF-6 STAR proposal to provide adjustment to countries with marginal flexibility. This recommendation graduated with full adoption.
Recommendations are more likely to achieve full adoption when follow-up actions are identified in the management responses. Fifty-four recommendations were graduated or retired from the MAR with follow-up actions identified by management in their responses, 44 percent (37) of which were adopted fully with a high rating upon graduation. Where follow-up action was not specified in the management response, only 22 percent (12 out of 54) reached the same level of adoption (figure 6).

When the management response provides a time-bound action plan to address the recommendation, it is feasible to assess implementation progress and adoption level by the target completion date. For instance, the 2006 Evaluation of Incremental Cost Assessment recommended strengthening efforts to include better identification of global environmental benefits in GEF activities. In the management response, the GEF Secretariat committed to refine the new approach to incremental costs and to present a proposal to the Council at its June 2007 meeting. The “Operational Guidelines for the Application of the Incremental Cost Principle” was submitted and discussed at the June 2007 Council meeting, and this recommendation graduated with full adoption.

In the case of developing a knowledge management strategy, the second recommendation of the 2017 Evaluation of Knowledge Management in the GEF focused on development of a work plan on knowledge management and learning. GEF management fully agreed with this recommendation, but no time-bound action was identified in its response. This recommendation was retired in 2021 with a medium level of adoption, as no work plan or knowledge management strategy had been developed. The 2020 Evaluation of Knowledge Management revisited this issue and, once again, recommended that the GEF partnership develop a clear knowledge management strategy. The adoption level of this recommendation is yet to be assessed.
3.3. Assessment of follow-up to recommendations

42. The GEF MAR adopts a two-tier approach to assessing the implementation and adoption of recommendations. On an annual basis, the IEO invites GEF management to provide a self-assessment rating of the adoption level of recommendations tracked in the MAR and provide evidence on actions that have been taken to implement the recommendations. Subsequently, the IEO validates the self-assessment and provides its own rating on the level of adoption.

43. The IEO validation concurred fully with 57 percent (248 out of 435) of management self-assessment ratings on the level of adoption. For the 186 recommendations tracked in the MAR during the period 2006–21, there were 435 records of management’s self-assessment ratings on progress toward adoption of recommendations, each corresponding to a validation rating from the IEO. Where there was concurrence, a majority (67 percent, 166 out of 248) had a rating of a high or substantial adoption level (table 4). In 34 cases, the IEO did not find evidence of adoption (rated as not possible to verify), while management’s self-assessment rated at least a medium level of adoption.

Table 4: Comparison of self-assessment and validation ratings

</tr>
</tbody>
</table>

Note: The green shade represents ratings where there was concurrence, blue represents higher ratings by the IEO than management, and gray represents lower ratings by the IEO than management.

a. Eleven recommendations rated as not applicable were excluded from this analysis.
44. **The concurrence between management’s self-assessment ratings and IEO validation ratings has improved over the GEF replenishment periods.** When the adoption level of recommendations was first assessed in the MAR in GEF-3 (2006), the concurrence rate was only 41 percent (figure 7). This rate has steadily increased in each GEF period and reached 68 percent for the assessment conducted in GEF-7 (till June 2021). The upward trend shows a shared understanding on the implementation progress of follow-up actions to recommendations.

![Figure 7: Concurrence rate in the assessment of recommendations by GEF replenishment period](image)

45. **It takes four years on average for a majority of recommendations to achieve at least a substantial level of adoption.** Seventy percent of the recommendations that were graduated or retired achieved a high or substantial level of adoption after four years of implementation (figure 8). Approximately half (55 percent, 11 out of 20) of the recommendations that did not achieve full or substantial adoption by the fourth year were operational recommendations related to improving project M&E systems and streamlining the project review process in GEF-3 and GEF-4.
46. **It is often difficult to determine the extent of progress, without a timeline for implementation of follow-up actions.** Of the 186 recommendations tracked in the MAR before the process reform, 47 (25 percent) were deferred by the IEO in the annual assessment of implementation as it was too early to assess their progress toward adoption. These 47 recommendations were from the semi-annual evaluation reports that were presented to the Council in May and November 2017. For 36 out of the 47 recommendations the management response did not provide a timeline for follow-up actions. Subsequently, the annual assessment of implementation of follow-up actions for these recommendations was postponed.

47. **The MAR is regarded as a GEF corporate-level activity by the GEF Agencies, as most recommendations are not directly targeted at Agencies, limiting the opportunities for them to engage in the MAR process.** Twelve out of the 18 GEF Agencies participated in the key informant interviews or provided written responses to the interview questions. With the exception of the United Nations Development Programme (UNDP), the Agencies stated that they have not been directly involved in the GEF MAR process. UNDP’s involvement is specifically related to the joint evaluations of the Small Grants Programme. Management used to share MAR template with the Agencies, but the practice was discontinued in 2015.

48. The GEF Secretariat discusses GEF IEO evaluation findings and recommendations with the Agencies to identify ways to address them. Several Agencies pointed out that during the recent GEF-8 replenishment process, GEF IEO evaluation recommendations were presented and considered throughout the discussions and were mainstreamed in the GEF-8 documents.
Eight of the 12 surveyed Agencies showed a strong interest in being more actively involved in the GEF MAR process. Suggestions given by the Agencies to encourage their participation in the process include the following:

(a) Specify the key actors for implementation in the GEF IEO recommendations.
(b) Use the Agency retreat to increase awareness of the MAR among Agencies.
(c) Where relevant, improve the MAR process to incorporate Agencies’ feedback and comments into management responses to IEO recommendations, so that the Agencies are involved in the process and will be able to implement these recommendations.
(d) Make the MAR a living document online to enable and facilitate Agency participation.

3.4. Retiring recommendations

The process of retiring recommendations was introduced in the GEF MAR system in 2014. A Council decision and the associated recommendations are retired when less than substantial progress has been achieved in their implementation and more than five years have elapsed since the decision was made, or subsequent Council decisions have superseded the earlier decision.

The majority of retired recommendations (75 percent, 38 out of 51) were rated as less than substantially adopted. Four of the six directional recommendations were retired as having less than a substantial level of adoption; these recommended operational actions to make project approval and implementation more flexible and context-specific for SIDS; to improve project M&E systems; to improve engagement of operational focal points in project M&E activities; and to improve data accuracy in the PMIS.

The main reason recommendations are retired are because they are superseded by later Council decisions/recommendations (figure 9). For example, the 2015 Joint GEF-UNDP Evaluation of the Small Grants Programme recommended that “the GEF and UNDP should continue upgrading, building on strengths while addressing the weakness identified. The criteria for selection of countries for upgrading should be revisited.” This recommendation was retired when a new Council decision was made in 2021 when the Third GEF-UNDP Joint Evaluation of the Small Grants Programme recommended that the program reconsider the need for a continued upgrading policy.
4. LESSONS FROM THE INSTITUTIONAL COMPARISON

53. A MAR process is implemented as an accountability mechanism in many multilateral organizations. To draw on their experiences, a benchmarking exercise helped to understand current good practices through institutional comparison that covers formulation of management responses and action plans, assessment of implementation of recommendations, and MAR tracking platforms (see annex 3 for more details).

54. Nine institutions with independent evaluation functions are included in the benchmarking, seven of which adopt the approach of implementing an action plan to address recommendations. The benchmarking exercise identified the following common features shared by these seven institutions:

   (a) Management responses clearly state the level of agreement, indicating whether management agrees, or partially agrees, with or rejects each recommendation.

   (b) Management’s action plans are developed for fully agreed and partially agreed recommendations.

   (c) Action plans are clearly aligned with the evaluation recommendations and are specific, measurable, achievable, relevant, and time-bound (SMART).

   (d) When an action plan is implemented, the self-assessment in the MAR focuses on the status of action plan implementation and the overall adoption of the recommendation.

   (e) A four point rating scale is used to assess the progress on implementation of action plan in the MAR system, namely high, substantial, moderate, and low.

   (f) To make the MAR process user friendly, an online platform/information technology (IT) system is used to centralize the recording of recommendations, management responses, action plans, and their follow-up in MAR.

55. The benchmarking exercise found that the GEF process of tracking and reporting on the implementation of recommendations shares some the good practices in peer institutions and in this matter is more advanced than other global partnerships:
56. The GEF IEO independently assesses the level of adoption of recommendations once a year and reports this status to the GEF Council. Based on the benchmarking exercise, the following gaps in the GEF MAR system were identified:

(a) The GEF IEO would present all evaluation reports 8 weeks prior to the presentation of the report to the Council, to allow for sufficient time to develop a management response.

(b) The management response presented to the Council needs to clearly indicate the level of agreement with each recommendation (fully agreeing, partially agreeing, or rejecting).

(c) For fully and partially agreed recommendations, management’s action plan should include a description of the actions to be taken, the responsible party, and the time frame for implementation. The GEF Council could, in certain cases, consider extending the time for presenting action plans and timelines to the subsequent Council meeting.

(d) The assessment rating in the MAR will need to be updated accordingly to capture timing and implementation progress on the action plans.

(e) An online platform could be used to improve efficiency in recording and monitoring implementation of recommendations and better facilitate the participation of relevant parties.

5. CONCLUSIONS AND RECOMMENDATIONS

5.1. Conclusions

57. Conclusion 1: GEF IEO recommendations are implemented with substantial follow-up actions. During the assessed period (2006–21), 74 percent of the recommendations were adopted with full or substantial status. Policy recommendations were more likely to be fully adopted than were recommendations on strategic or operational issues. Recommendations were more likely to be adopted when they were aligned with the GEF Secretariat’s work plans on GEF corporate-level policies.

58. Conclusion 2: Recommendations were more likely to be implemented and adopted when management expressed full agreement and clearly identified follow-up actions in the management responses to recommendations. When recommendations were fully agreed upon by management, they were more likely to be adopted (at least substantially), compared to partially agreed or rejected recommendations. Recommendations were also more likely to be fully adopted when follow-up actions to address them were specified in the management responses.
59. **Conclusion 3:** Management responses prepared after the MAR process reform provide a greater level of detail in action plans to address recommendations, but tracking progress on implementation will require actions and timelines in all cases. Both management’s response rate and level of agreement with recommendations have improved since the change in the MAR process was introduced in June 2021. The majority of the management responses prepared after the MAR reform included action plans with time frames. Where such timelines are missing, it will be difficult to track whether follow-up actions are completed in a timely manner.

60. **Conclusion 4:** The concurrence in management’s self-assessment and the GEF IEO’s validation ratings has improved, indicating a shared understanding on implementation and adoption. The GEF MAR adopts a two-tier approach to assessing the adoption of recommendations, which involves self-assessment by management and its validation by the GEF IEO. The concurrence in the assessment ratings has improved over the GEF replenishment periods. Going forward, the assessment rating scale in the MAR will be updated to assess progress against the management action plans.

61. **Conclusion 5:** The comparative analysis demonstrates that while the GEF MAR system has several good practices, there are gaps that can be addressed to make the system serve as a better accountability and learning tool. The GEF MAR process has improved since the reform in 2021. The system would benefit further from clearly addressing the recommendations to specific actors in the partnership, a clear articulation of acceptance or rejection of recommendations by management, a time-bound action plan in the management response, greater participation of GEF Agencies on relevant recommendations, and the use of a suitable platform to improve access and efficiency in recording and monitoring the implementation of recommendations. If a period of more than 8 weeks prior to presentation of an evaluation is required to develop a detailed action plan with timelines in response to an IEO evaluation, the Council might, in certain cases, consider allowing the presentation of the detailed action plan and timelines by the GEF Secretariat at the next Council meeting. The GEF Secretariat would still present a management response at the Council meeting in which the IEO evaluation is presented.

5.2. **Recommendations**

62. **Recommendation 1:** GEF management should ensure that the action plan included in its management response to GEF IEO recommendations lists specific actions with timelines where appropriate. GEF management should ensure that the management response to an evaluation clearly indicates the level of agreement with each recommendation. Where management fully or partially agrees with a recommendation, a clear articulation of time-bound actions should be included in the management response which will make it possible to track progress on the implementation of follow-up actions and report on these to the Council. Where additional time is required by the GEFSEC to develop detailed action plans and timelines on certain evaluations, the Council may consider giving the GEF Secretariat time until the next Council meeting to present the details.

63. **Recommendation 2:** The GEF should improve the MAR process and reporting through a more participatory approach involving GEF Agencies, where relevant, and develop a suitable platform for tracking the implementation of action plans. Where IEO recommendations are
clearly directed towards GEF Agencies or other actors, GEF management should explore ways to incorporate Agencies’ and/or others feedback and comments when preparing action plans to implement IEO recommendations and in assessing the implementation progress of follow-up actions. In this way, Agencies or other actors can respond to recommendations that are directed toward them and will be able to implement and track these recommendations. A suitable platform that centralizes the recording of recommendations, management responses, action plans, and follow-up will help streamline access and improve efficiency in monitoring the status of implementation.

Annex 2: Interview protocols

Interview questions for GEF management:

1. How is the management response to IEO recommendations developed? What are the challenges?
2. How is the management action plan formulated? Are there challenges to be addressed?
3. How is the implementation of the management action plan being tracked? What, if any, have been the challenges related to tracking?
4. How involved is the GEF Council in the MAR process?
5. What role do the implementing Agencies play in developing management responses and assessing the follow-up actions?
6. What further improvements could be made to the MAR system?

Interview questions for GEF Agencies:

1. To what extent, and how, has your Agency been involved in the GEF MAR process, including the development of management responses to GEF IEO evaluation recommendations, and assessing the progress of follow-up actions?
2. To what extent does the GEF MAR process provide incentives that enable Agency participation? How can IEO, GEF management, and GEF Agencies better support this through their respective functions?
3. Does your organization have its own Management Action Record/Management Response tracking system? If yes, how does it compare with that of the GEF?
4. What role has your agency played in the development of GEF-8 programming and policy directions? To what extent, and how, are GEF IEO evaluation recommendations mainstreamed in the process?
5. Do you have any suggestions to improve the GEF MAR?
