

Exercise: Global Environmental Benefits and how they link to GEF projects

Global Environmental Benefits (expressed through key indicators)	Sample Indicators from GEF Tracking Tools	Project, for which indicator/s would apply
1 Biodiversity Land and Seascapes (hectares covered)	<ul style="list-style-type: none"> - Total area deforested or with forest significantly degraded, as indicated by satellite imagery (hectares) - Extent of the landscape or seascape where the project will directly or indirectly contribute to biodiversity conservation or sustainable use of its components (hectares) 	
2 Sustainable Land Management (hectares covered)	<ul style="list-style-type: none"> - Vegetative cover (natural & cultivated cover such as forest, shrubs, herbaceous, incl. crops) (hectares covered) - What production system(s) will the project target? Please provide an estimated coverage of the area targeted. (hectares covered) 	
3 Chemicals and Waste (tons of mercury reduced)	<ul style="list-style-type: none"> - Amount and type of Persistent Organic Pollutants (POPs) eliminated or reduced (tons) - Amount of Mercury reduced (tons) 	
4 Globally over-exploited fisheries moved towards sustainability (% by volume)	<ul style="list-style-type: none"> - Globally over-exploited fisheries moved to more sustainable levels (% by volume) 	
5 Enhanced water-food-ecosystem security (number of freshwater basins)	<ul style="list-style-type: none"> - Enhanced Water-Food-Energy-Ecosystems security and conjunctive management of surface and groundwater (# of basins) 	
6 GHG mitigation (tons of CO ₂ eq reduced)	<ul style="list-style-type: none"> - Total Lifetime Direct and Indirect GHG Emissions Avoided (Tons CO₂eq) - Installed renewable energy capacity (gigawatt) 	

Which other indicators could meaningfully help you measure progress of implementation of your project? Please list them here.
