<td>13. Comment on the project’s innovative aspects, sustainability, and potential for scaling up.</td>
<td>The project seeks to clean up the gold supply chain in Honduras which would allow in better pricing of the gold thereby creating a platform for others to replicate in the country. The project will also promote replication from using national resources to do additional work.</td>
<td>Since the PIF approval, the Government has taken steps towards formalization of the ASGM sector which greatly improves the ability of the project to be sustained in the ASGM community which could result in a total reduction of mercury in Honduras.</td>
